ALL STOCK IS SOLD IN UNDIVIDABLE BUNDLES OF 25 TREES

ALL STOCK IS PERISHABLE, AND MUST BE PICKED-UP ON DELIVERY DAY, USUALLY LATE APRIL OR EARLY MAY (NOTICE WILL BE EMAILED).

S=SEEDLINGS TP=TRANSPLANTS ORDER EARLY - LIMITED SUPPLY - NO REFUND/WARRANTY ON ALL PRODUCTS.

KENOSHA COUNTY TREE PROGRAM IS OPEN TO EVERYONE - YOU DO NOT NEED TO BE A KENOSHA COUNTY RESIDENT TO PARTICIPATE.

COMMON NAME	DESCRIPTION AND CHARACTERISTICS
AMERICAN ELDERBERRY	A shrub with large flattened clusters of tiny cream-colored flowers in summer, fragrant; large clusters of small dark purple berries in late summer. Full sun to partial shade; moist, well-drained soils are best, but will tolerate some dryness as well as wet sites; tolerates alkaline soil. Can grow up to 12' tall and 10' wide.
BLACK CHERRY	Tree which bears dark green leaves which turn yellow to red in fall and white flowers which bloom in spring. Also edible fruit in summer. Is a good wildlife species. Grows to a height of 50-60 feet.
BLACK CHOKEBERRY	Black chokeberry is a deciduous, cold-hardy shrub, showing white flowers in the spring and colorful red foliage and heavy, dark fruit in the fall. Tolerates partial shade but thrives in full sun. It is also an excellent choice for those tough, low-lying wet areas, yet it can acclimate itself to dry locations as well. It reaches 4-8 feet in height. Black chokeberry provides browse for white-tailed deer and rabbits, and fruits for ruffed grouse.
BLACK WALNUT	One of the scarcest and most coveted native hardwoods, Used especially for furniture, gunstocks, and veneer. Fragrant leaves. Likes deep, rich, well-drained soil; grows more slowly in drier soils. Grows to 50' to 75', 60' spread. The delicious nuts must be gathered early, before squirrels and other wildlife can consume them.
BALSAM FIR	This pyramidal evergreen will grow in cool, moist and swampy areas. Dark flat needles ½-1" long, slow growing, symmetrical, evergreen tree. Soft, bright green needles. Nice fragrance for Christmas trees. Mature height 75', mature spread 20'.
COLORADO BLUE SPRUCE	One of the most popular ornamental conifers, the Colorado blue spruce (or simply, blue spruce) grows best in full sun, in moist, well-drained, fertile soils. The Colorado blue spruce grows to a height of 50-75' and a spread of 10-20' at maturity. Needles are stiff, short, and silvery blue to greenish blue in color. The species has an excellent natural shape and requires little shearing.
COMMON LILAC	The Common Lilac is noted for its showy, fragrant bloom in late spring. Flowers come in many colors ranging from white, pink, blue, lavender to reddish-purple, clusters of flowers sit against dark green, heart shaped leaves, and the fragrance is just delightful. Grows best in well drained, fertile soils, under full sunlight. Average height is 15'.
EASTERN ARBORVITAE	Up to 20 feet tall and 6-8 feet wide at maturity. Very dark green color year-round. Medium growth rate and very hardy. Used for screening and foundation planting. When young it grows bushy but when it gets to 3-4 feet it grows more pyramidal. They prefer full sun to partial shade and can grow in a variety of soil conditions.
FRASER FIR	A favorite of many for a Christmas tree. This tree has an excellent fragrance with exceptional needle retention. Strong branches are turned slightly upward which give the tree a compact appearance and shows the silvery color. Full to partial sun. Likes cool, moist, well-drained soils. Height 30-40 ft Width 20-25 ft.
HAZELNUT	A large fast-growing shrub with showy spring flowers. The Hazelnut can grow to 8-12' tall with a crown spread of 10', creating a dense privacy screen, perfect for a hedgerow and as nesting sites for birds. The nuts of this American Hazelnut have a higher nutritional value than acorns and beechnuts, making them a valuable food source for wildlife eaten by turkey, ruffed grouse, and pheasants.
NORTHERN RED OAK	One of the faster growing oak trees. Has reddish fall color and grows to a height of 60-75 feet with similar width and a broad rounded shape. Excellent for wildlife planting.
NORWAY SPRUCE	The Norway Spruce is the most widespread, fastest growing, largest and most disease resistant spruce in the northern hemisphere. This is not a tree for a small yard! The Norway Spruce can grow 2-3+ feet per year their first 25 years under good conditions. The Norway spruce has a fibrous deep spreading root system, able to withstand strong winds.
PIN OAK	Relatively fast-growing oak tree with bright red fall color. Will grow to a height of 60-70 feet with a width of 25-40 feet. Often used as a street tree in urban settings.
RED-OSIER DOGWOOD	Grows best in moist to wet soils with full sunlight. Average height is 8' and it spreads outward to 6'. Has bright red twigs with white flowers and white berries in the summer. Leaves turn dark red in the fall. The shrub's deep red stems create a pop of color in the snowy, gray months. Fibrous root systems also provide effective erosion control on banks and slopes. Good for providing wildlife food and cover.
RIVER BIRCH	The River Birch is generally tolerant of many soil conditions. In optimal conditions will grow to a height of 40-70 feet with a width of 40-60 feet. Has a reddish-brown exfoliating bark and is generally resistant to bronze birch borer.
WHITE PINE	The White Pine is a large, straight-stemmed tree with a pyramidal crown. Clustered soft blue-green needles. Ideal screen or windbreak. Likes moist, well-drained soils. Grows 50' to 80' with a 20-40' spread.
WATER GEL ONE BAG WILL TREAT ABOUT 100 TREES	Water Gel is a powder, which is mixed with water to form a gel that the roots of the seedling are dipped into. The gel acts as a water-holding medium and helps to maintain an even moisture balance around the seedling roots after planting. The gel will remain active for at least one growing season.
